Glimpse into the future

Autodesk®

Glimpse into the future

Joining the Autodesk Developer Network (ADN) gives you a competitive advantage. With ADN, you gain access to early versions of the world's leading design software (including international language versions), flexible training, technical consulting, and API support from Autodesk experts and software engineers – all so you can use our software capabilities to the fullest. Get a heads-up on what's coming from Autodesk. Use your ADN membership to get ahead in the market.

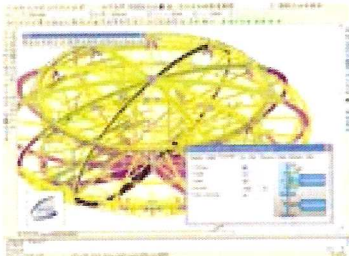

Take advantage of our technology

You need a software platform with versatility. With Autodesk®, you have found it. Autodesk's entire history – and success – has been based on the premise of open platform. Since AutoCAD® was first released two decades ago, Autodesk has welcomed partners and customers who use our platform, as a springboard for their own industry-specific applications.

And it's not just AutoCAD. Today, along with AutoCAD, Autodesk has a number of robust design software development platforms, including:

- Autodesk Inventor® for Manufacturing
- Autodesk® Civil 3D® for Civil Engineering
- Autodesk® Revit® for Building Design
- Autodesk DWF® for Collaboration and more.

ADN speeds up your development process and expedites the flow of information through your company. From product definition to market introduction, Autodesk supports blue-sky thinking. Our role is to provide you with the technology you need to realise your ideas.

Get support

A variety of services and support are available to ADN members. Expert support is provided by a specialised team of software engineering consultants, many of whom have a development background just like you. API training is regularly offered at locations throughout the world.

Do you need technical answers in real-time ...at your own office? Take advantage of ADN's Mentoring Programme, which provides a level of advisory service that goes above and beyond everyday tech support. As part of the Mentoring Programme, an Autodesk expert visits your company location and works side-by-side with your programmers.

Whether your engineers have hit a temporary snag or whether you need to fast-track your entire product development cycle, an ADN software engineer can help you be more productive.

Gain early insight

Get a sneak peek into Autodesk's technology vision so you can develop your own long-term strategy. Your IT department needs to get information early. It takes time to migrate to new technology and map out an integration plan.

As an ADN member, you can access beta software and pre-release development licenses to test your applications in plenty of time to accommodate change. Personalised support and consulting from ADN will help you work out a plan to roll out the latest technology.

Streamline processes

ADN simplifies your entire operational process while improving coordination and collaboration – without compromising project schedules. Receive the most current software releases – in multiple language versions – and leverage Autodesk technology to your best advantage. The result is more than smoother implementation and short-term productivity gain. At ADN, the question is not just, "Can it be done?" Our software engineering approach is: "How can it best be done?"

Stay on top: special partner programs

Have you ever thought of building a private-label software application? Or, are you looking for a highly secure application environment? Explore a variety of special partner programs such as Autodesk OEM.

ADN members can take advantage of special technology licensing agreements to build applications ranging from sales tools to supply chain automation.

For information on OEM, UAR, and other special partner programs, visit: www.autodesk.com/oem.
